

Fruit extracts aha range

ALPHA HYDROXY ACIDS

Alpha Hydroxy Acids – how do they work?

Alpha Hydroxy Acids work by exfoliating the skin causing the surface skin cells to 'slough off' to reveal newer, less damaged skin cells beneath. Skin care resurfacing.

Why use Arbré AHA's?

Many products containing AHA's only use one or two types of alpha hydroxy acids. Arbré have developed a range of products that contains three (3) different variants of AHA's designed to offer a complete and effective treatment.

Arbré fruit extracts with AHA's

- ▶ lactic acid
 - ▶ citric acid
 - ▶ glycolic acid
- > Triple action AHA

Each acid has a different molecule size, they work better as a harmonious formula. Thus the treatment has instant and long term benefits'

What does Arbré fruit extract with AHA's do?

- ▶ exfoliates the skin
- ▶ works to reduce hyper pigmentation
- ▶ works to reduce age spots
- ▶ help reduce surface scarring
- ▶ hydrates and rejuvenates skin cells
- ▶ stimulates production of collagen and elastin
- ▶ plus avocado for its soothing properties

The Arbré professional AHA treatment delivers instant results. Professional Arbré aha treatments and procedures are available for beauty therapists only
